MAIN SEAL REPLACEMENT INSTRUCTIONS

Connector Maintenance:
- A daily, weekly and periodic inspection of the connector by competent person is recommended. User must establish a regular interval for maintenance as determined by the user media and operational environment.
- Inspection should include visual checks of the sealing area, handle wear, missing or loose components, leak tightness, ease of operation, sufficient lubrication, wear, dirt accumulation and damage.
- Establish a regular interval for lubrication. The media and environment will be determining factors in establishing this interval to prevent dryness and/or corrosion.
- Difficulty of operation after continual use indicates a need for lubrication or other maintenance.
- Use only original FastTest spare parts that are designed for the application and are subject to strict quality control. See Warranty.

Safety Warnings – Guidelines:
- If instructions are not completely understood by operator or components are missing, contact FastTest before attempting use of the connector.
- Application Safety: All FastTest products have been designed with safety in mind, however, it is the responsibility of the product users to design each process in such a way to avoid mishaps that can cause physical hazard or property loss. Secondary restraints such as safety chains, shields, cages or fixtures are all good choices depending on the application. FastTest can recommend or assist you in clarifying potential hazards of your application.
- FastTest ZN Connectors are not internally valved, and will not prevent loss of media when disconnected. Do not attempt to disconnect unless safe conditions are met.
- FastTest ZN Connectors must only be used with test pieces of a specific size as indicated by the part number. Improper use could cause separation of the connector from the test piece resulting in physical harm or damage.

FastTest, Inc. Product Warranty
FastTest, Inc. warrants its products against defects of workmanship and material for 90 DAYS from the date of the sale by FastTest, Inc. This warranty is void if the product is mishandled, tampered with or used in a manner that is not in accordance with FastTest, Inc. recommendations and instructions. FastTest, Inc. is not liable for consequential or other damages including, but not limited to, loss, damage, personal injury, or any other expense directly or indirectly arising from the use of or inability to use its products either separately or in combination with other products. ALL OTHER WARRANTIES EXPRESSED OR IMPLIED, WHETHER ORAL OR WRITTEN, INCLUDING BUT NOT LIMITED TO WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE ARE EXPRESSLY EXCLUDED.
Remedy under this warranty is limited to replacement of the product or an account credit in the amount of the original selling price, at the option of FastTest, Inc. All allegedly defective products must be returned prepaid transportation to FastTest, Inc. along with information describing the products performance, unless disposition in the field is authorized in writing by FastTest, Inc.

ZN Main Seal Replacement Instructions
Description: Main Seal Replacement Procedure for ZN Series Connectors

ZN1 MODEL
BOLT SHAFT

ZN2, 3 & 4
MODEL
NUT SHAFT

Please thoroughly read and understand these seal replacement instructions prior to dis-assembling the ZN connector.

- Dis-Assembly
- Seal Installation
- Re-Assembly
- Function Check
- Connector Maintenance
- Safety Warnings – Guidelines
**MAIN SEAL REPLACEMENT INSTRUCTIONS**

**ZN1 DIS-ASSEMBLY:**
1. ZN1 Connectors utilize a hex bolt shaft. Thread washer cap forward (ALL SIZES) until it touches body. Using a ¼” wrench or socket remove bolt. Hold handle from spinning as bolt is loosened and removed. Remove small o-ring in groove on bolt. Discard washers and main seal.

**ZN2, 3 & 4 DIS-ASSEMBLY:**
2. These three ZN sizes utilize the hex nut to retain seal sets. Hold handle from spinning as nut is loosened and removed. Discard washers and seal(s). **NOTE:** Washers and nuts can typically be re-used.

**ZN1 RE-ASSEMBLY:**
3. Load bolt with new seal kit parts, tapered washer, main seal and flat washer. Then slide the spacer and o-ring back onto bolt and place smallest o-ring back in groove on bolt.

4. Loaded Bolt, threads into an internal shaft. Using same ¼” wrench or socket. Tighten until you feel a hard stop. Bolt threads into a hard stop inside the internal shaft.

**ZN2, 3 & 4 RE-ASSEMBLY:**
5. Load shaft with new seal kit parts, flat washer, main seal(s) and tapered washer. Thread nut back on shaft and tighten with wrench or socket. Tighten nut until you feel a hard stop. **NOTE:** Washers and nuts can typically be re-used.

**FUNCTIONAL CHECK:**
Prior to applying pressure to the termination port rotate handle in both directions. Make sure connector draws shaft back and compress’s seal(s) as it did prior to dis-assembly.

- **CAUTION NOTES:**
- **CAUTION:** The maximum rated pressure is stamped on the connector body. Before using, verify that this pressure rating is within your working pressures.
- **WARNING:** Tug on the connector to assure proper engagement and gripping before introduction of pressurized media.
- **DO NOT** force connector onto test part when connecting. Forcing the connector will result in poor sealing and possible leakage.
- **DO NOT** spin test piece on seal once lever has been rotated 90° degrees.
